

PUSH EVERY LIMIT

SuperPro.

we push ourselves to the **extreme** to ensure you get the best suspension components on the **planet.**

SuperPro bushes are pushed to the **extreme** through rigorous testing programmes both on the road and in our specialised in-house testing facilities. We test them for compression and stretch resistance. Then we test them for heat, chemical and abrasion resistance. Then we do it **over and over and over again**....we give them such a hammering, it amazes us how much they cop!

It's years of this kind of intensive research and development that has resulted in a special blend of polyurethane that stands up to the extreme pounding suspension bushings are subject to. Superior design also means that the bushings remain well lubricated inside and out, ensuring freedom of movement with a reduced likelihood of flat spots.

So If you're in the business of motor vehicle suspension, go with SuperPro. **You'll reach your limit before we reach ours.**
